Clearline

Get paid in digital dollars without the detective work.

Digital dollars: stablecoins such as USDC and USDT.

Working demo · seeking feedback

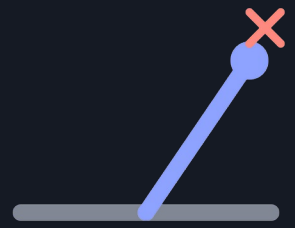

Aashmiin Kaur · Singapore Management University · October 2026

Paid in seconds. Checked for hours.◦

> “We paid INV-1043 in full yesterday. Please confirm and close the invoice.”
> Illustrative · fictional demo company

Paid too little

Wrong network

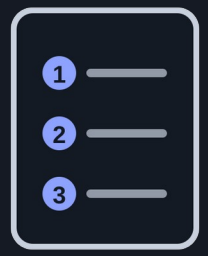

Counterfeit

No invoice number[1]

[1] A token transfer records sender, receiver and amount: no invoice reference (ERC-20 standard, eips.ethereum.org/EIPS/eip-20).
◦ estimate or assumption † untested guess unmarked = sourced

Clearline is a smart cashier for digital dollars

Customers know exactly how to pay

Correct ones: ready to mark paid on approval

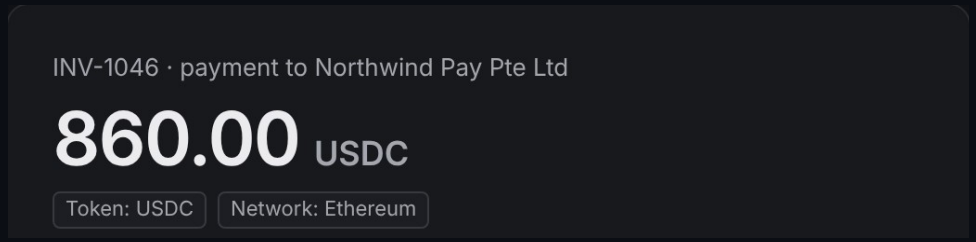

Problems explain themselves, reply drafted

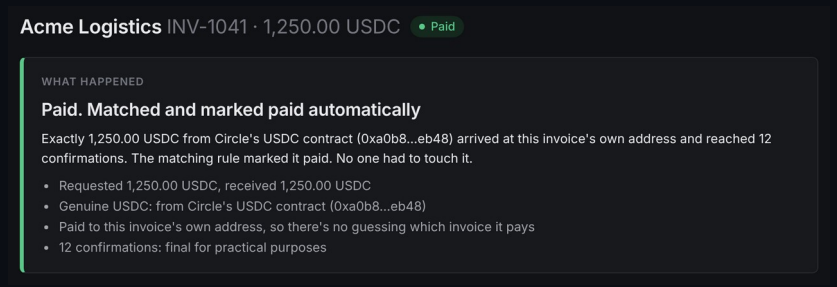

Runs today in the working demo, on fictional data. Clearline reads payments; it never holds or moves money.

It works today: a real demo on fictional data

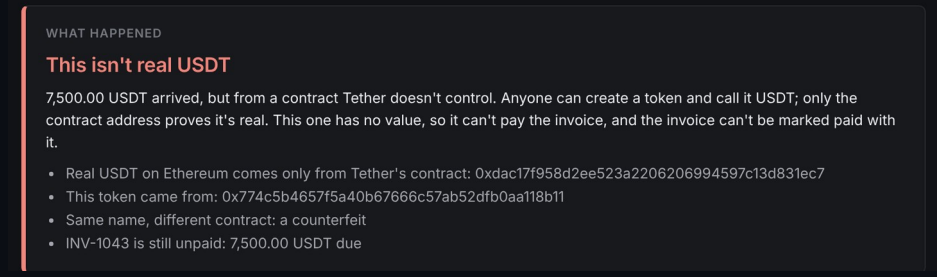

1 The customer sees what to send

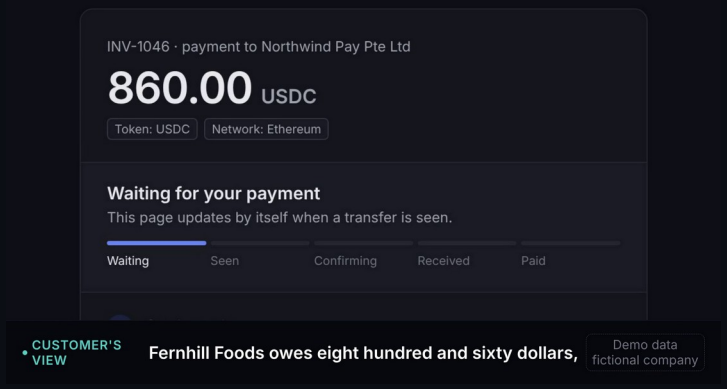

2 A correct payment marks itself paid

3 Fake dollars, explained

▶️ Live demo · 60 s

Real screenshots and a real recording of the app in demo mode. All companies, people and amounts are fictional.

The rules and the money are arriving now

Rules

Singapore consulted on its stablecoin law, Sep–Oct 2026[1]

Business use

~US$226B a year of business stablecoin payments◦[2]

Singapore

A top-5 sender of stablecoin payments[3]

[1] MAS consultation, 1 Sep 2026 (mas.gov.sg; Gibson Dunn) [2] McKinsey with Artemis, 2026: an estimate, ~0.01% of B2B payments [3] Artemis, Oct 2025

Direct payments are the gap others leave◦

Checkout page

Gateway matches it

Direct transfer

our wedge

A person sorts it out◦

Tool	Does well	Leaves ◦
Checkout	Own payments	Direct transfers
Wallets	Warn senders	The invoice
Risk tools	Scam tokens	The reply
Accounting	The books	Exceptions

Belief: business customers often pay directly, not via checkout pages◦

Examples and sources for each row in the speaker notes (docs.stripe.com · eco.com · fintechnews.sg · KuCoin News · trustwallet.com · blockaid.io · bitwave.io). Not yet compared: TRES Finance, Cryptio.

◦ estimate or assumption † untested guess unmarked = sourced

Two pricing bets, and a small test market first

Direct per team

S$300–800/mo◦

Embedded per exception

S$1–3†

300+

Web3 firms in Singapore[1]

× ~50%†

paid directly

× S$6k◦

a year each

S$0.9M◦

test-market ceiling

Then: Southeast Asia, India, gateways◦

vendor calls[2]

0

customers

Next: 10 finance-team interviews

“Do customers pay through a checkout page, or send directly?”

[1] demo/REPORT.md: held-out cases (59/59 on tuning cases); explanations and matching not yet tested on real data. [2] Custodian and compliance-software teams, 16 Oct 2026, on an earlier idea.

A solo founder who builds and sells

AK

Aashmiin Kaur

Year 2 Accountancy, Singapore Management University

Self-taught coder (CS50); built Clearline with AI coding tools

Business development: Protégé Ventures, Hatch

SMU BIG incubator

Looking for: payments operations experience

Founder's own background.

Three things would help me most

1 **Honest feedback on the wedge**

Is direct payment really the gap?

2 **3–5 introductions**

Finance teams receiving stablecoins

3 **Advice on gateways**

How to partner, if at all

Aashmiin Kaur aashmiin@gmail.com · linkedin.com/in/aashmiin-kaur-479665391

Backup · Five risks, and what I'd do about each

Checkout tools absorb it	Interview test; if so, a gateway plug-in◦
Licensing	Read-only, never moves money; a lawyer confirms◦
Data access	Public chain data + invoice export first◦
A wrong match	No guessing: a person confirms
Solo founder	Find a payments-ops co-founder◦

“No guessing” is how the demo works today; matching is untested on real data.
◦ estimate or assumption † untested guess unmarked = sourced

Backup · Hard questions, honest answers

A YC partner

No buyer interviews yet: how do you know?
I don't yet. Vendors said it isn't an issue for them; my next ten calls are finance teams that receive stablecoins.

S$0.9M market: why venture-scale?
It isn't proven. Singapore is a test market; the region and the gateway route get sized once interviews give exception counts.

Why won't Stripe or HitPay just build this?
They might. If buyers mostly pay through checkout pages, I'll build the plug-in for gateways instead of competing.

A payments expert

Per-invoice addresses fix references. What's left?
Payments that ignore the instructions: short, wrong network, fake tokens, old addresses. How common they are, I don't know yet.

Crypto accounting tools reconcile already. Why you?
They match and book; I focus on investigating exceptions and drafting the reply. I haven't tested whether that difference matters.

Who's liable for a wrong match? A licence?
A person confirms anything non-routine, and fakes can't be marked paid. It never holds money; a lawyer must confirm licensing.
