Acorn Payments - fictional

7-day window | COMPLETE | FICTIONAL DEMO

Started 2026-10-22T11:43:04.634Z. Finished 2026-10-22T11:43:04.640Z.

48 incoming observations | 7 review signals

Confirmed problem payments: not assessed. USD loss: not established.

Company ownership is user-supplied. This report is not a claim that the named company lost funds or failed to credit customers.

Coverage and limitations

Incoming indexed USDT/USDC-symbol transfer observations only. No mempool or failed-call coverage.
Credit, holds, minimums, intended network and customer ownership require company records.
BNB tokens are bridged; issuer-native authenticity and freeze checks are not assessed.
History may omit event indices. Observations are not exact ledger join keys.

Top observed signals

Contract differs from issuer list: 4. Verify token identity and policy.
Zero-value transfers: 3. Not evidence of loss or poisoning by themselves.
All other observations have no signal in the limited checks run; they are not certified normal payments.

Address scope

ethereum: Fictional Acorn wallet

Provider evidence
